The StarPlane project addresses two concerns in optical networks:

1. The Basic StarPlane Management Infrastructure
StarPlane allows applications to take advantage of the increased bandwidth and potential flexibility in optical networks by letting them create their own network topology in a simple way.

2. The Applications and Their Needs
StarPlane will discover how this new freedom to manipulate the network will benefit the applications.

StarPlane will use the physical infrastructure provided by SURFnet 6 and the distributed supercomputer DAS-3. Hybrid optical networks such as SURFnet 6 allow network administrators to partition the network and to create multiple overlay networks, each with a different logical topology. The novelty of StarPlane is that it does give this flexibility directly to the applications by allowing them to choose the logical topology in real time, ultimately with subsecond switching times.

Staff members of the research team:

- Prof. dr. ir. H.E. Bal  VU   professor
- Dr. ir. H. Bos      VU   assistant professor
- Dr. ir. C.T.A.M. de Laat  UvA associate professor
- Prof. dr. P.M.A. Sloot  UvA   professor
