Switch to the Cloud, think before you start

Recently, the media has become intensely about the numerous attacks on municipalities, universities, colleges and the NWO. In addition to these well-known attacks, we also see a lot of attacks on Microsoft Exchange and services to view your own email from your hands to sales to the

in the Microsoft software. Fortunately, Microsoft’s cloud based email program (Office 365), and those of the other big tech companies are relatively safe. It therefore seems only understandable that these are easy to introduce e-mail and other services to the apparently more secure Cloud solutions of the American Big Tech industry.

University boards also increasingly decide to outsource the maintenance of ICT services to US Cloud Giants. That is special, because in the Volkskrant of December 2019, the rectors of the Dutch universities on this matter, in order to maintain the independence of American companies.

In the Netherlands, this long-term strategy is still in the experimental phase. But is this tool to be left to the strict conditions?

But why is the e-

The students work at home from their mother countries. What are the long-term costs and do we still have the rights to an understanding of the mother? Do we have a clear picture of this?

Ethics

In 2016, the EU and the US signed the “Privacy Shield” treaty, protecting the privacy of European citizens. But does this treaty actually provide enough protection for the data of Dutch students?

Foreign students

In the short term, it can indeed be advantageous to outsource ICT services to the Cloud. Financial

However, commercial companies that offer a Cloud solution can use data for multiple purposes, for example housing around the Cambridge Analytica scandal. In most cases, the
